

1500 psig / 100 barg

This screw compressor knows how to generate power.

Get the performance of a recip and the reliability of a screw compressor — in one machine.

Kobelco screw compressors produce up to 1,500 psig (100 barg) discharge pressures. That's ample power for efficient fuel gas booster service.

Plus their robust, API 619-compliant design is so reliable, you'll get longer continuous run times. All while reducing maintenance costs and eliminating the need for a spare.

Their energy-efficient slide valve system provides maximum power savings under varying conditions. And with no emissions, pulsation or vibrations, it's environmentally friendly and ideal for Dry Low NOx applications.

Kobelco screw compressors – put the power to work for you.
